## 1 System introduction

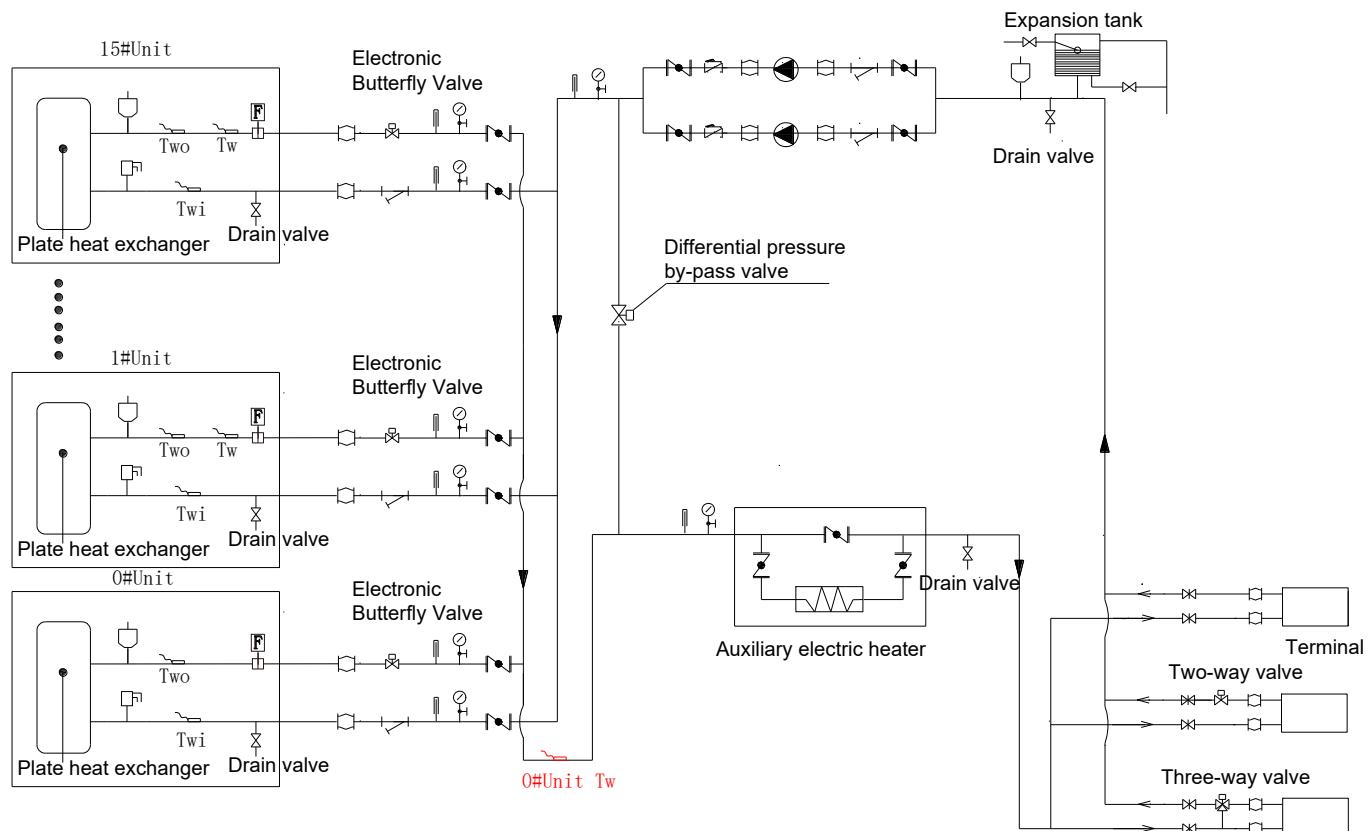

### 1.1 System Schematic

Aqua thermal Super is an integrated air-to-water space heating and space cooling heat pump system. The outdoor heat pump system extracts heat from the outdoor air and transfers this heat through refrigerant piping to the plate heat exchanger in the hydronic system. The heated water in the hydronic system circulates to low temperature heat emitters (floor heating loops or low temperature radiators) to provide space heating. The 4-way valve in the outdoor unit can reverse the refrigerant cycle so that the hydronic system can provide chilled water for cooling using fan coil units.

The heating capacity of heat pumps decreases with the decrease of ambient temperature. Aqua thermal Super is reserved an auxiliary electric heater control port to provide additional heating capacity for use during extremely cold weather when the heat pump capacity is insufficient. The auxiliary electric heater also serves as a backup in case of heat pump malfunction and for anti-freeze protection of the outside water piping in winter.

### 1.2 Typical Applications

#### 1.2.1 Air Conditioning mode (Installation of variable frequency pump in the project)

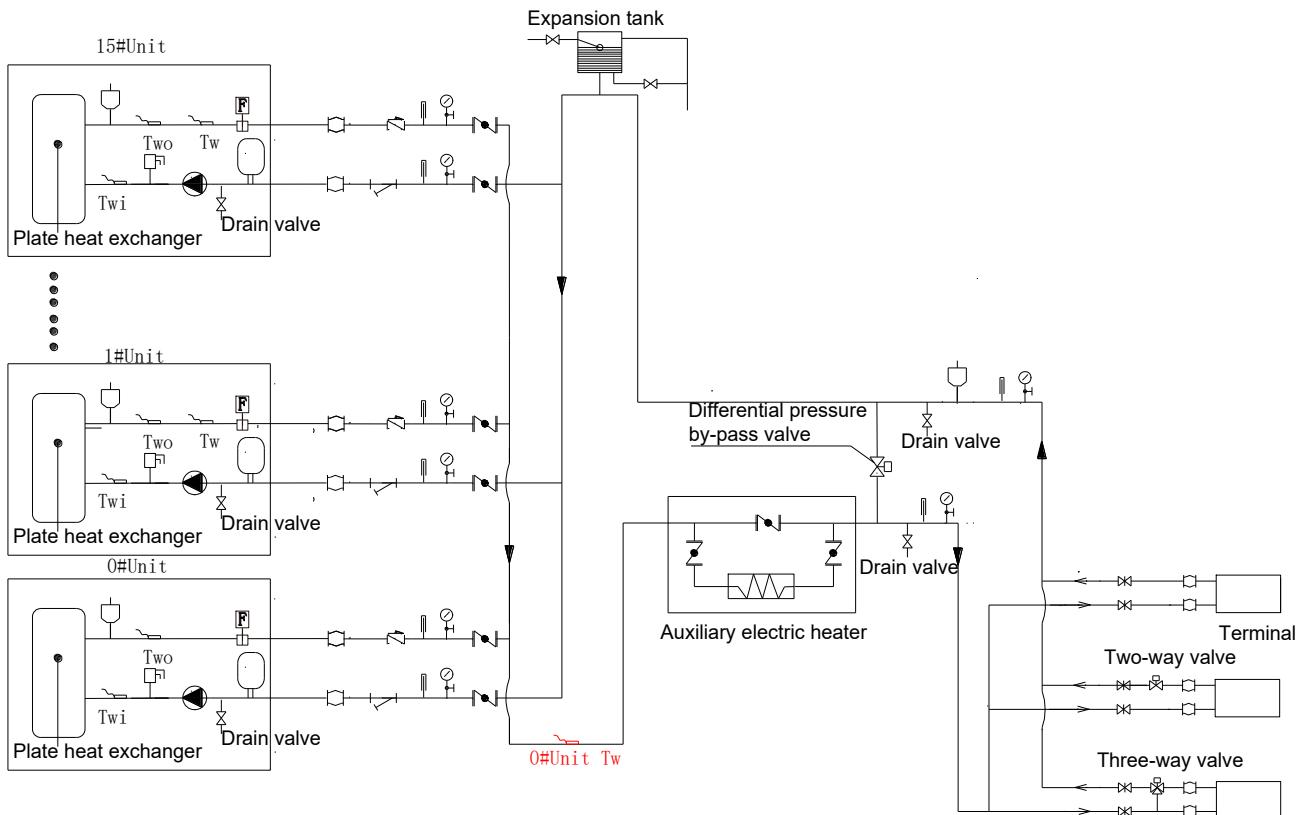

#### Symbol explanation

	Drain valve		Water pressure instrument		Water flow switch		Gate valve		Differential pressure by-pass valve
	Y-filter		Thermometer		Pump		Check valve		Atmospheric exhaust valve
	Expansion tank		Safety valve		Soft joint		Solenoid three-way valve		

Note:

1. The ratio of the two - way valves on the terminal shall not exceed 50 percent.
2. The main outlet water temperature sensing (Tw) head of the unit at address 0 needs to be placed on the main outlet pipe.
3. The hot water tank and the hot water exchange pump of the unit use the CN125 (220V) port control switch on the slave board of the 0 # unit, pump output is controlled through CN108 (0-10V).

### 1.2.2 Air Conditioning mode (unit with variable frequency pump)

Symbol explanation

Drain valve	Water pressure instrument	Water flow switch	Gate valve	Differential pressure by-pass valve
Y-filter	Thermometer	Pump	Check valve	Atmospheric exhaust valve
Expansion tank	Safety valve	Soft joint	Solenoid three-way valve	

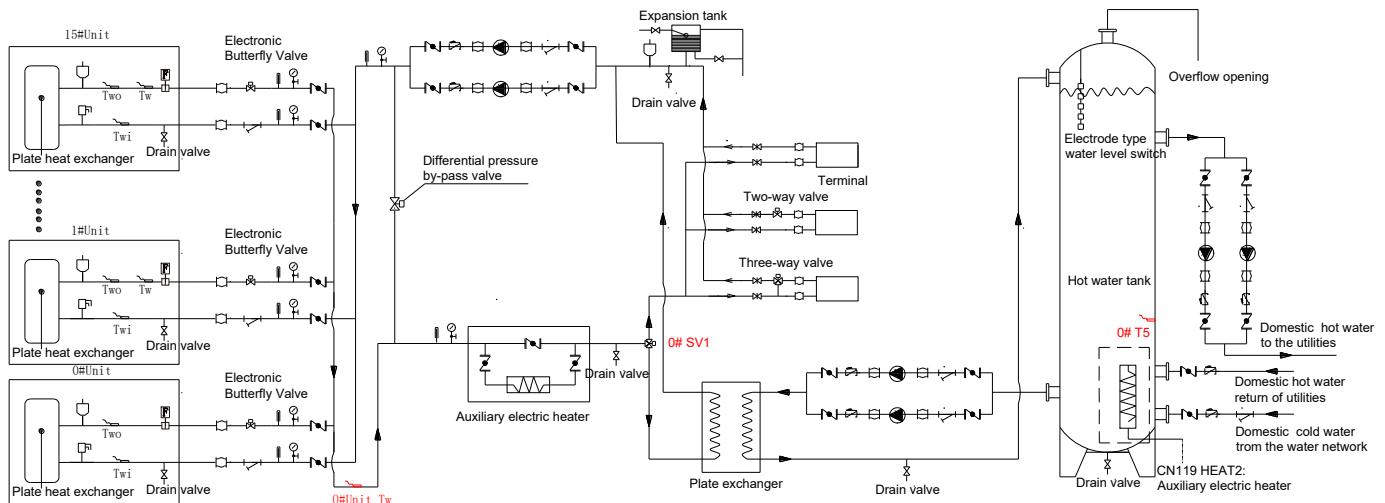

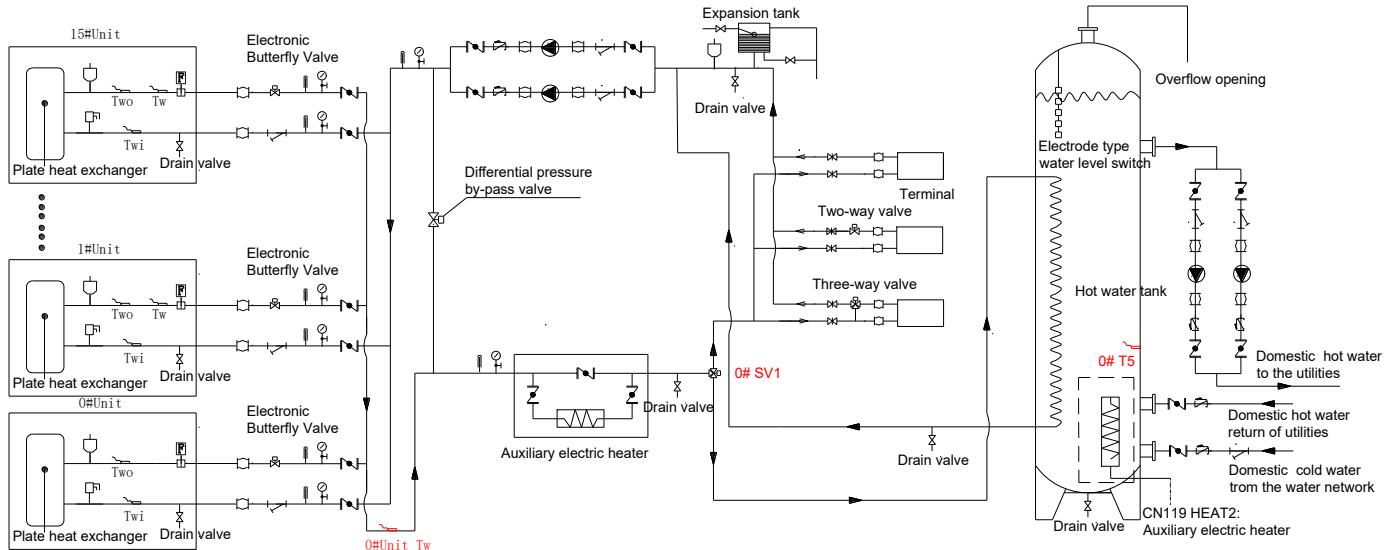

Note:

1. The ratio of the two - way valves on the terminal shall not exceed 50 percent.
2. The main outlet water temperature sensing (Tw) head of the unit at address 0 needs to be placed on the main outlet pipe.
3. The hot water tank and the hot water exchange pump of the unit use the CN125 (220V) port control switch on the slave board of the 0 # unit, pump output is controlled through CN108 (0-10V).

# High power heat pumps

**KAISAI**

## 1.2.3 Air conditioning and hot water mode (Installation of variable frequency pump in the project)

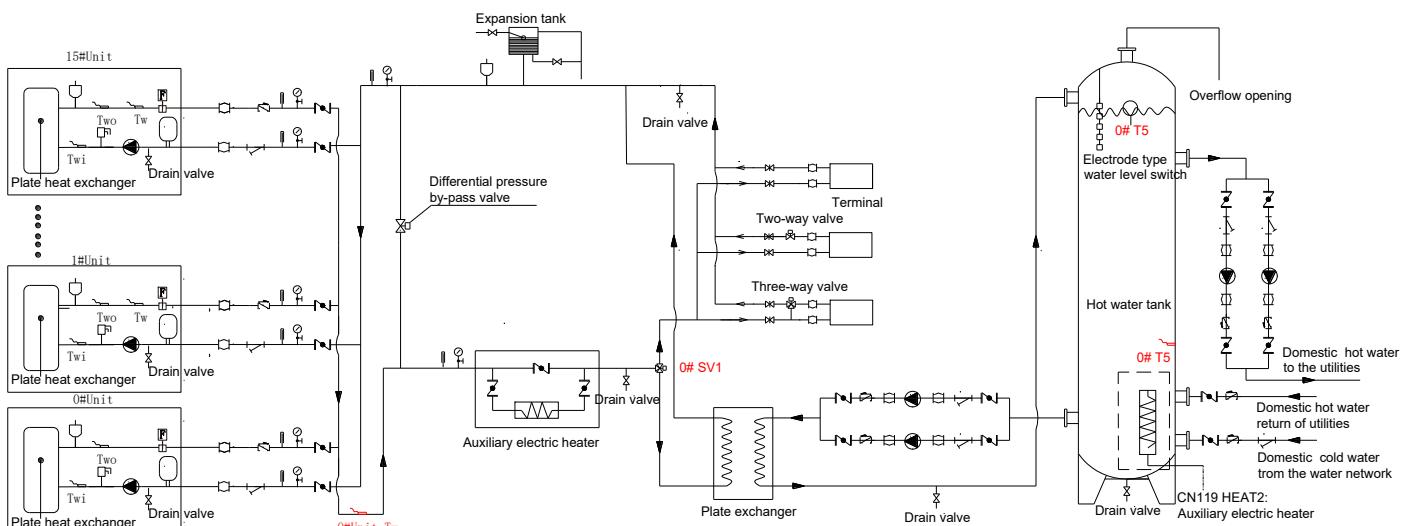

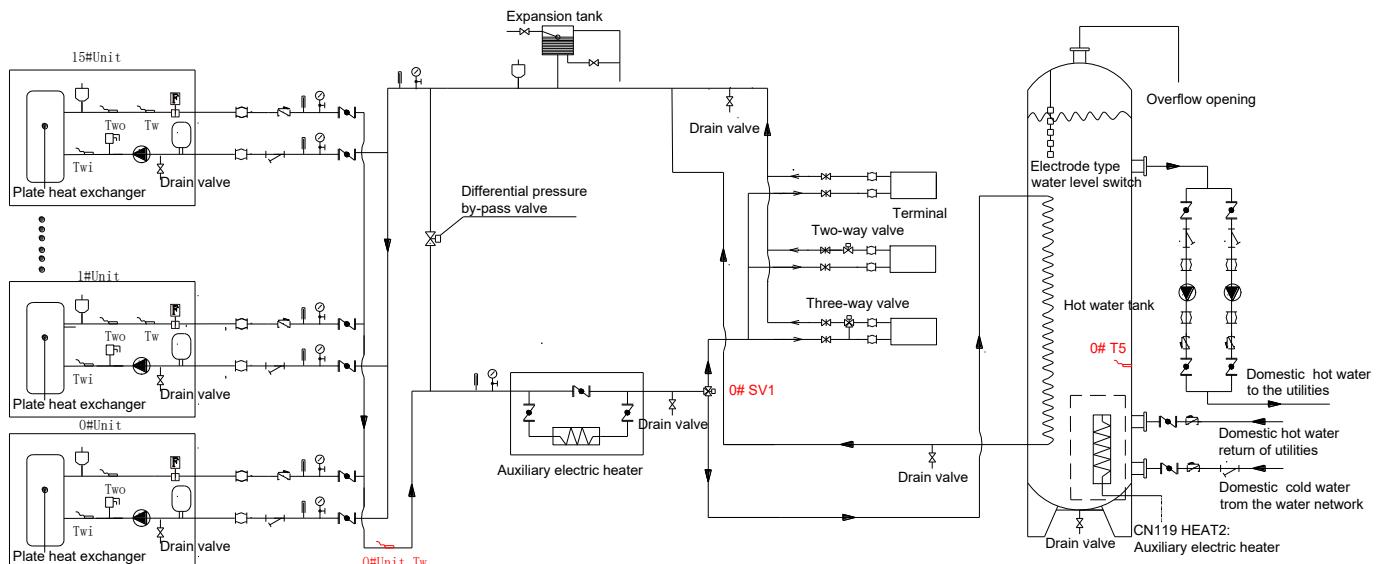

Symbol explanation

Drain valve	Water pressure instrument	Water flow switch	Gate valve	Differential pressure by-pass valve
Y-filter	Thermometer	Pump	Check valve	Atmospheric exhaust valve
Expansion tank	Safety valve	Soft joint	Solenoid three-way valve	

Note:

1. The ratio of the two - way valves on the terminal shall not exceed 50 percent.
2. The main outlet water temperature sensing (Tw) head of the unit at address 0 needs to be placed on the main outlet pipe.
3. The hot water tank and the hot water exchange pump of the unit use the CN125 (220V) port control switch on the slave board of the 0 # unit, pump output is controlled through CN108 (0-10V).

### 1.2.4 Air conditioning and hot water mode (unit with variable frequency pump)

Symbol explanation

Drain valve	Water pressure instrument	Water flow switch	Gate valve	Differential pressure by-pass valve
Y-filter	Thermometer	Pump	Check valve	Atmospheric exhaust valve
Expansion tank	Safety valve	Soft joint	Solenoid three-way valve	

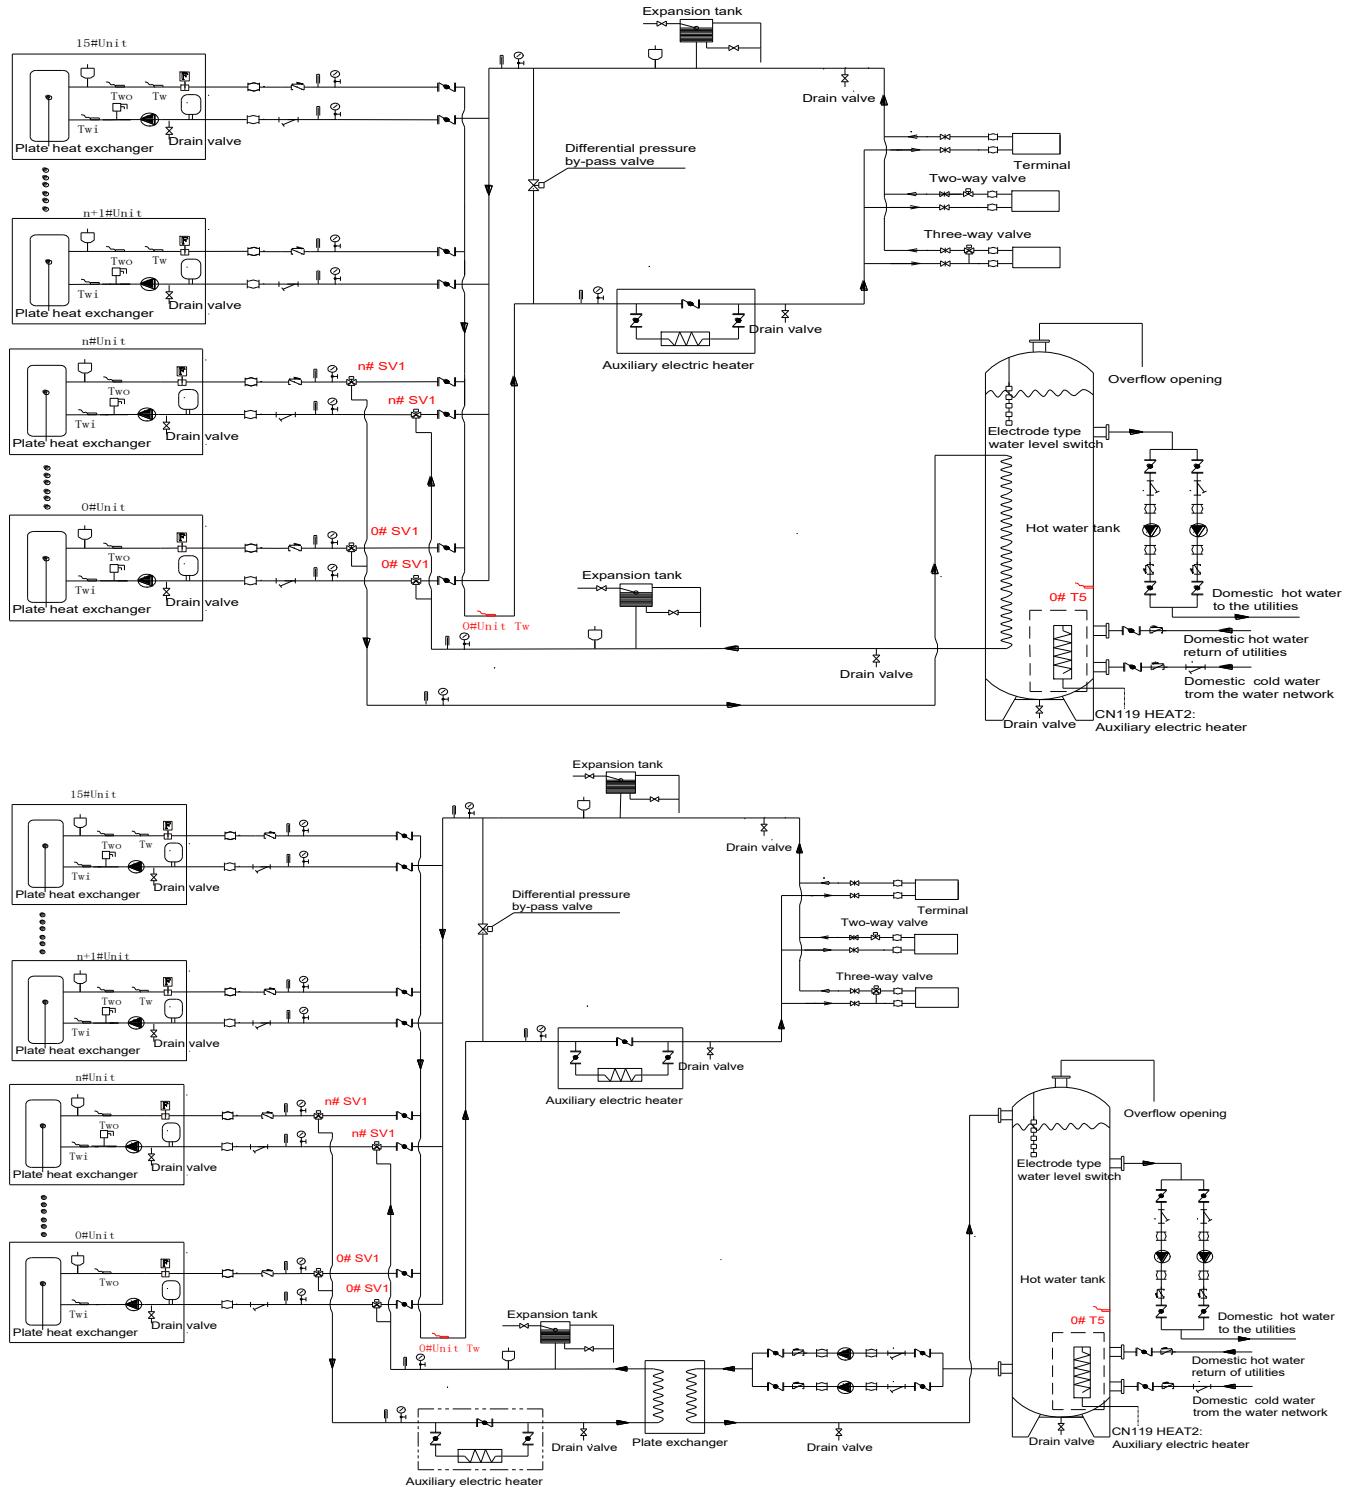

Note:

1. The ratio of the two - way valves on the terminal shall not exceed 50 percent.
2. The main outlet water temperature sensing (Tw) head of the unit at address 0 needs to be placed on the main outlet pipe.
3. The hot water tank and the hot water exchange pump of the unit use the CN125 (220V) port control switch on the slave board of the 0 # unit, pump output is controlled through CN108 (0-10V).

# High power heat pumps

**KAISAI**

## 1.2.5 Cooling and hot water mode are operated simultaneously (unit with variable frequency pump)

Symbol explanation

Drain valve	Water pressure instrument	Water flow switch	Gate valve	Differential pressure by-pass valve
Y-filter	Thermometer	Pump	Check valve	Atmospheric exhaust valve
Expansion tank	Safety valve	Soft joint	Solenoid three-way valve	

Note:

1. The ratio of the two - way valves on the terminal shall not exceed 50 percent.
2. The main outlet water temperature sensing (Tw) head of the unit at address 0 needs to be placed on the main outlet pipe.
3. The hot water tank and the hot water exchange pump of the unit use the CN125 (220V) port control switch on the slave board of the 0 # unit, pump output is controlled through CN108 (0-10V).

## 2 Product lineup

Model	KCHP-SU65-RN8L	KCHP-SU110-RN8L
Power supply	380-415V/3 ph/50Hz	380-415V/3 ph/50Hz
Appearance		

## 3 Nomenclature

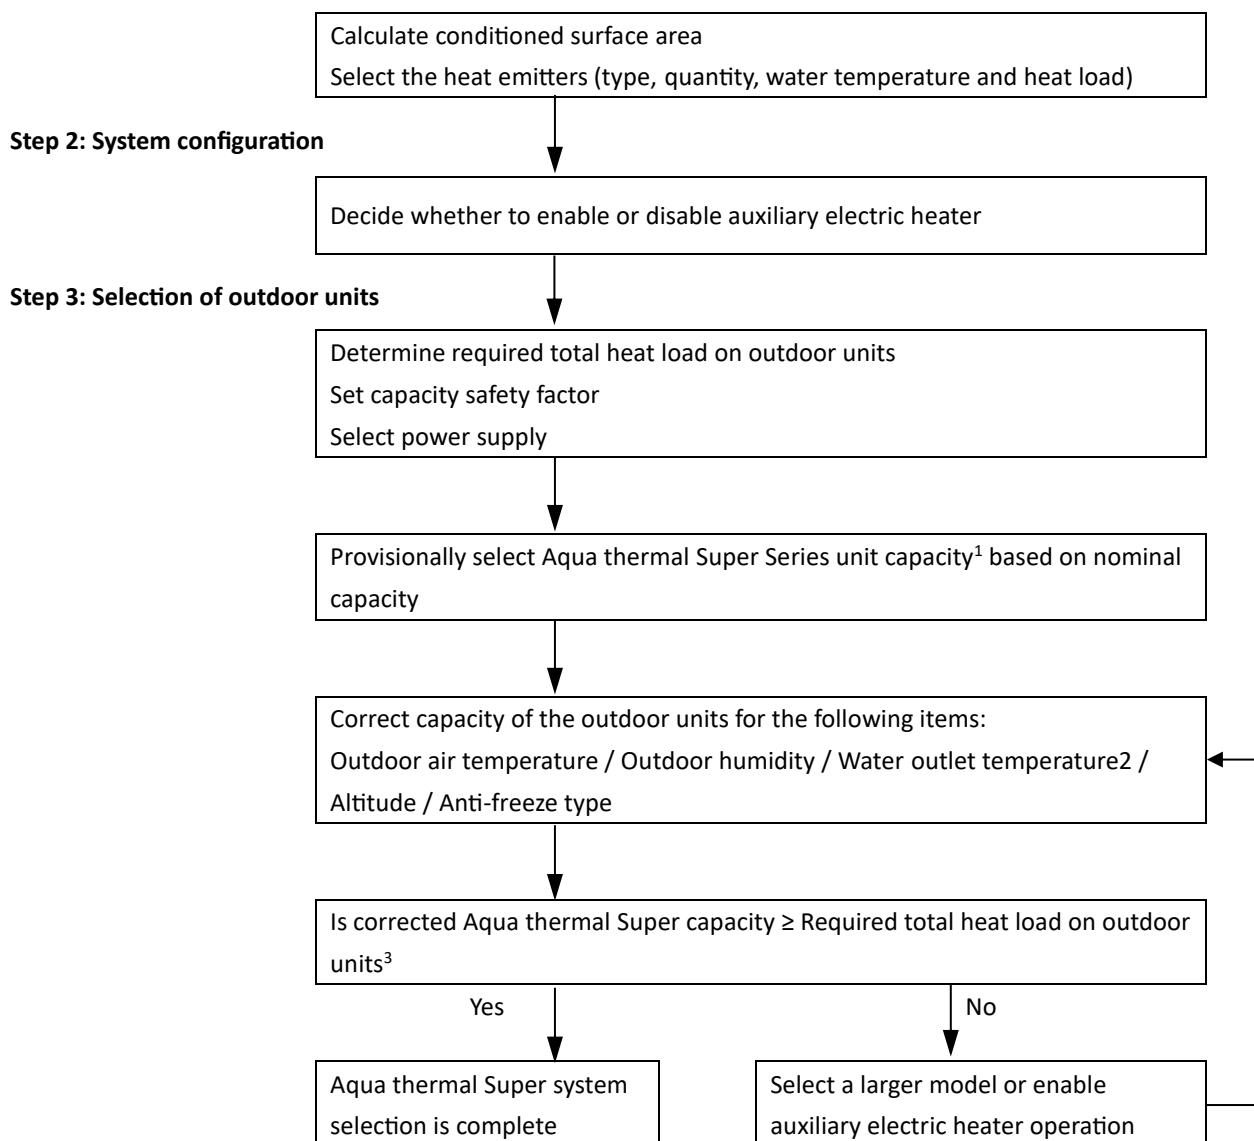

K	C	H	P	-	S	U	65	-	R	N8	L
1	2	2	2		3	4	5		6	7	8

Legend		
No.	Code	Remarks
1	K	Brand: KAISAI
2	CHP	High power heat pump
3	S	Series code
4	U	Special function code U: DC inverter compressor
5	65	Rated heating capacity (kW) 65: 65 kW /h; 110: 110 kW /h;
6	R	Power supply: 380-415V/3 ph/50Hz
7	N8	Refrigerant type N8: R32
8	L	L: Low temperature refrigeration function Omitted: Without low temperature refrigeration function

## 4 System Design and Unit Selection

### 4.1 Selection Procedure

#### Step 1: Total heat load calculation

#### Notes:

- Up to 16 units can be connected together, giving a system cooling/heating capacity range from 65kW to 1760kW.
- If the required water temperatures of the heat emitters are not all the same, the Aqua thermal Super's outlet water temperature setting should be set at the highest of the heat emitter required water temperatures. If the water outlet design temperature falls between two temperatures listed in the outdoor unit's capacity table, calculate the corrected capacity by interpolation.
- Select Aqua thermal Super which satisfies both total heating and cooling load requirements.

### 4.2 Modular Chiller Leaving Water Temperature (LWT) Selection

The recommended design LWT ranges for different types of heat emitter are:

- For floor heating: 35 to 45°C
- For fan coil units: 40 to 45°C
- For low temperature radiators: 40 to 50°C

### 4.3 Optimizing System Design

To get the most comfort with the lowest energy consumption with Aqua thermal Super, it is important to take account of the following considerations:

- Choose heat emitters that allow the heat pump system to operate at as low a hot water temperature as possible whilst still providing sufficient heating.

## Notes:

1. Test standard: EN12102-1. Outdoor ambient temperature 35°C DB. EWT 12°C, LWT 7°C

2. Outdoor ambient temperature 35°C DB. EWT 12°C, LWT 7°C

Sound pressure level is the test average measured in a semi-anechoic chamber. The test position is 1m right in front of the unit for four sides and  $(1+H)/2$  (where H is the height of the unit) above the floor. During in-situ operation, sound pressure levels may be higher as a result of ambient noise.

3. Antifreeze fluid is need when water temperature is less than 5 °C.

4. Electric heater installed in the tank is field supplied.

## 2 Electrical Characteristics

System	Outdoor unit				Power current		Compressor		Fan	
	Voltage (V)	Hz	Min.	Max.	MCA (A)	MOP (A)	MSC (A)	RLA (A)	kW	FLA (A)
			(V)	(V)	(A)	(A)	(A)	(A)

## 5 Performance Adjustment Factors

### 5.1 Ethylene and Propylene Glycol factors

The antifreeze must be required according to anyone condition as following:

- The ambient temperature is below 0 °C;
- Don't start up the unit for a long time.
- The power supply was cut off and needn't change the water in system.

A glycol solution is required when the unit with condition as mentioned. The use of glycol will reduce the performance of the unit depending on concentration.

Concentration of ethylene glycol (%)	Modification coefficient				Freezing point (°C)
	Cooling capacity	Power input	Water resistance	Water flow	
0	1.000	1.000	1.000	1.000	0
10	0.984	0.998	1.118	1.019	-4
20	0.973	0.995	1.268	1.051	-9
30	0.965	0.992	1.482	1.092	-16
40	0.960	0.989	1.791	1.145	-23
50	0.950	0.983	2.100	1.200	-37

Concentration of propylene glycol (%)	Modification coefficient				Freezing point (°C)
	Cooling capacity	Power input	Water resistance	Water flow	
0	1.000	1.000	1.000	1.000	0
10	0.976	0.996	1.071	1.00	-3
20	0.961	0.992	1.189	1.016	-7
30	0.948	0.988	1.380	1.034	-13
40	0.938	0.984	1.728	1.078	-22
50	0.925	0.975	2.150	1.125	-35

### 5.2 Evaporator temperature drop factors

Performance tables are based on a 5°C temperature drop through the evaporator. Temperature drops outside this range can affect the control system's capability to maintain acceptable control and are not recommended.

### 5.3 Altitude correction factors

Performance tables are based at sea level. Elevations other than sea level affect the performance of the unit. The decreased air density will reduce condenser capacity and reduce the unit's performance. Maximum allowable altitude is 1800meters.

### 5.4 Fouling factor

Fouling refers to the accumulation of unwanted material on solid surfaces, most often in an aquatic environment. The fouling material can consist of either living organisms (biofouling) or a non-living substance (inorganic or organic). Fouling is usually distinguished from other surface-growth phenomena in that it occurs on a surface of a component, system or plant performing a defined and useful function, and that the fouling process impedes or interferes with this function.

Other terms used in the literature to describe fouling include: deposit formation, encrustation, crudding, deposition, scaling, scale formation, slagging, and sludge formation. The last six terms have a more narrow meaning than fouling within the scope of

## High power heat pumps

**KAISAI**

the fouling science and technology, and they also have meanings outside of this scope; therefore, they should be used with caution.

Fouling phenomena are common and diverse, ranging from fouling of ship hulls, natural surfaces in the marine environment (marine fouling), fouling of heat-transfer components through ingredients contained in the cooling water or gases, and even the development of plaque or calculus on teeth, or deposits on solar panels on Mars, among other examples.

Foreign matter in the chilled water system will adversely affect the heat transfer capability of the evaporator, and could increase the pressure drop and reduce the water flow. To provide optimum unit operation, proper water treatment must be maintained. Refer to the table as following.

ALTITUDE (m)	Difference of water inlet and outlet temp. (°C)	Fouling Factor							
		0.018 m <sup>2</sup> . °C /kW		0.044 m <sup>2</sup> . °C /kW		0.086 m <sup>2</sup> . °C /kW		0.172 m <sup>2</sup> . °C /kW

## 1 Introduction

During installation, the unit's settings and parameters should be configured by the installer to suit the installation configuration, climate conditions and end-user preferences. The relevant settings are accessible and programmable through the SERVICE and PROJECT menu on the wired controller's user interface.

## 2.5 Setting address

MENU > Service Menu > Setting address

SERVICE MENU
STATE QUERY
CLEAR HISTORY ERROR
SETTING ADDRESS
HEAT CONTROL
OK
1/3
◀ ▶

**SETTING ADDRESS** is used to set whether the unit can be controlled by wired controller and through MDOBUS. **SETTING ADDRESS** can also enter by combining buttons pressing , for 3s.

CONTROLLER ADDRESS	◀ 10 ▶ #
CONTROL ENABEL	◀ NO ▶
MODBUS ENABLE	◀ NO ▶
MODBUS ADDRESS	◀ 10 ▶ #
OK	◀ ▶

**CONTROLLER ADDRESS** selects the unit address then we can check the parameters about this unit.

If **CONTROL ENABEL** sets as YES, it means the controller can set all the parameters; if **CONTROL ENABEL** sets as NO, it means the controller can only display the parameters.

If the chiller system access to MODBUS system, **MODBUS ENABLE** should be set as YES. Please note that in this case, **COMTROL ENABLE** should be also set as YES, otherwise the units cannot be controlled.

**MODBUS ADDRESS** set the controller address if the Modbus system is available.

## 2.6 Heat control

MENU > Service Menu > Heat control

SERVICE MENU
STATE QUERY
CLEAR HISTORY ERROR
SETTING ADDRESS
HEAT CONTROL
OK
1/3
◀ ▶

HEAT CONTROL
HEAT1
HEAT2
FORCED HEAT2 OPEN
OK
◀

**HEAT1** means pipe electric heating in cooling/heating mode.

**HEAT2** means tank electric heating in DHW mode.

HEAT1	
HEAT1 ENABLE	◀ NO ▶
TEMP-	◀ 07 ▶ °C
AUXHEAT1-ON	
TW. HEAT1-ON	◀ 25 ▶ °C
TW. HEAT1-OFF	◀ 45 ▶ °C
OK	
1/2	
◀ ▶	

HEAT2	
ALL HEAT2 DISABLE	◀ YES ▶
SELECT ADDRESS	◀ 10 ▶ #
HEAT2-ENABLE	◀ NO ▶
T-HEAT2-DELAY	◀ 190 ▶ MIN
DT5-HEAT2-OFF	◀ 10 ▶ °C

FORCED HEAT2 OPEN ▲ NO ▼									
00	01	02	03	04	05	06	07		
08	09	10	11	12	13	14	15		
OK					◀	▶	◀	▶	

**TEMP-AUXHEAT1-ON** sets the ambient temperature below which the pipe heater (field supplied) turns on.

When the leaving water temperature reaches TW. HEAT1-ON, the pipe electric heater (field supplied) turns on automatically.

When the leaving water temperature reaches TW. HEAT1-OFF, the pipe electric heater (field supplied) turns off automatically.

If the system is installed with tank booster heater, ALL HEAT2 DISABLE should be set as YES.

**HEAT2-ENABLE** sets the state of tank booster heater of SELECT ADDRESS.

**T-HEAT2-DELAY** sets the delay time for tank booster heater to turn on after the compressor starts.

**DT5-HEAT2-OFF** sets the temperature difference between the actual water temperature and setting temperature above which the tank booster heater turns off.

**T4\_HEAT2\_ON** sets the ambient temperature that tank booster heater turns on. (00~15 means unit address)

If **FORCED HEAT2 OPEN** is set as YES, when  $T5 < T5S-1$ , then tank electric heater turns on; when  $T5 \geq T5S$ , then tank electric heater off. (00~15 means unit address)

## 2.7 Temperature Compensation

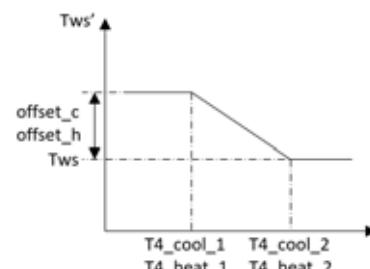

MENU > Service Menu > Temperature Compensation

SERVICE MENU									
TMEPERATURE COMPENSATION									
PUMP CONTROL									
MANUAL DEFROST									
LOW OUTLET WATER CONTROL									
OK					2/3	◀	▶	◀	▶

With the help of **TEMPERATURE COMPENSATION**, water temperature will automatically change as outside air temperature changes. When outdoor air temperature increases/decreases, the heating load will decrease/increase and water temperature will decrease/increase automatically. When outdoor air temperature decreases/increases, the cooling load will decrease/increase and water temperature will increase/decrease automatically.

TEMP COMPENSATION									
COOL MODE ENABLE					◀ YES ▶ °C				
T4 COOL-1					◀ 15 ▶ °C				
T4 COOL-2					◀ 08 ▶ °C				
OFFSET-C					◀ 10 ▶ °C

### 3 PROJECT MENU

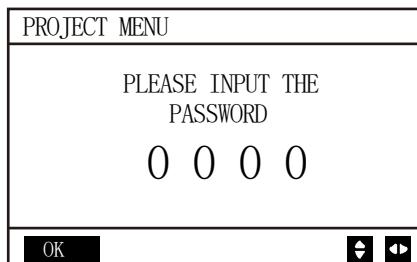

#### 3.1 Structure

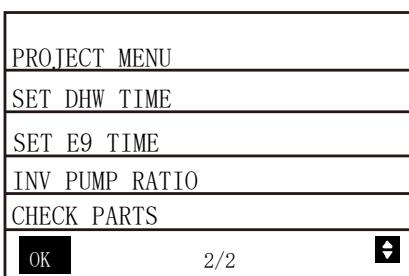

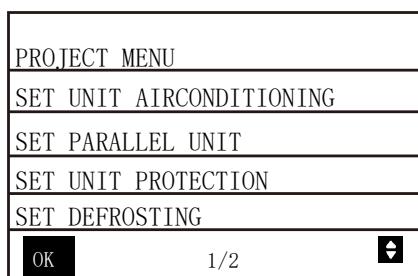

## 3.2 Project Menu

### MENU > Project Menu

Project Menu allows installers to input the system configuration and set the system parameters. Enter the password, using **<>** to navigate between digits and using **▼ ▲** to adjust the numerical values, and then press **OK**. The password is 9877.

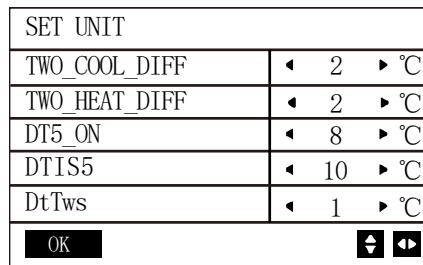

The following pages will be displayed after putting the password.

## 3.3 SET UNIT-AIRCONDITIONING

### MENU > Project Menu > SET UNIT-AIRCONDITIONING

**TWO\_COOL\_DIFF** sets the minimum temperature difference between the leaving water temperature (Two) and the leaving water set temperature (TwoS) above which the unit will start for cooling mode. When Two - TwoS  $\geq$  TWO\_COOL\_DIFF, unit starts. When TwoS - Two  $\geq$  2 lasts for 5s, unit stops.

**TWO\_HEAT\_DIFF** sets the minimum temperature difference between the leaving water temperature (Two) and the leaving water set temperature (TwoS) above which the unit will start for heating mode. When TwoS - Two  $\geq$  TWO\_HEAT\_DIFF, unit starts. When Two - TwoS  $\geq$  2 lasts for 5s, unit stops.

If unit is customized with the DHW function, when  $\text{TempW\_heat\_Min\_n} \leq T5 < \text{Min}(T5S, \text{TempW\_heat\_Max\_n}) - \text{dT5\_ON}$  and  $\text{Two} < \text{Min}(T5S, \text{TempW\_heat\_Max\_n}) - 2$ , then DHW mode is on.

Note:

The value of TempW\_heat\_Min\_n, T5S, TempW\_heat\_Max\_n are related to the ambient temperature, which are already fixed in the program.

T5 means the water tank temperature

T5S means the setting temperature of DHW mode

The target leaving water temperature of DHW mode is  $\text{Twos} = \text{T5S} + \text{DT1S5}$ . If  $\text{Two} > \text{TempW\_heat\_Max\_n}$ , then DHW mode is off.

**DtTws** is reserved.

### 3.4 SET PARALLEL UNIT

MENU > Project Menu > SET PARALLEL UNIT

SET PAPALLEL UNIT	
TIM_CAP_ADJ	◀ 180 ▶ S
TW_COOL_DIFF	◀ 2 ▶ °C
TW_HEAT_DIFF	◀ 2 ▶ °C
RATIO_COOL_FIRST	◀ 0 ▶ %
RATIO_HEAT_FIRST	◀ 50 ▶ %
OK	◀ ▶

**TIM\_CAP\_ADJ** sets the period of capacity adjustment

**TW\_COOL\_DIFF** sets the minimum temperature difference between the total leaving water temperature (Tw) and the total leaving water set temperature (TwS) above which the unit will start for cooling mode. When  $Tw - TwS \geq TW_COOL_DIFF + 1$ , unit starts. When  $TwoS - Tw \geq 2$  lasts for 5s, unit stops.

**TW\_HEAT\_DIFF** sets the minimum temperature difference between the total leaving water temperature (Tw) and the total leaving water set temperature (TwS) above which the unit will start for heating mode. When  $TwS - Tw \geq TW_HEAT_DIFF + 1$ , unit starts. When  $Tw - TwS \geq 1$  lasts for 5s, unit stops.

**RATIO\_COOL\_FIRST** sets the number of initial startup units for cooling mode.

**RATIO\_HEAT\_FIRST** sets the number of initial startup units for heating mode.

### 3.5 SET UNIT PROTECTION

MENU > Project Menu > SET UNIT PROTECTION

SET UNIT PROTECTION	
T_DIFF_PRO	◀ 12 ▶ °C
TWI_O_ANORMAL	◀ 2 ▶ °C
OK	◀ ▶

**T\_DIFF\_PRO** set the absolute difference between entering water temperature (Twi) and leaving water temperature (Two). If  $|Twi - Two| \geq T_DIFF_PRO$ , unit stops and error code P9 appears. Normal heat pumps when  $|Twi - Two| \geq 10^\circ C [T_DIFF_PRO]$ , or high temperature heat pumps  $|Twi - Two| \geq 15^\circ C$ , error code disappears.

**TWI\_O\_ANORMAL** sets the difference between entering water temperature (Twi) and leaving water temperature (Two). For cooling mode, if  $Two - Twi \geq TWI_O_ANORMAL$  and lasts for 20min, unit stops and error code PA appears. If  $Two - Twi \leq TWI_O_ANORMAL - 1$ , error code disappears. For heating mode, if  $Twi - Two \leq TWI_O_ANORMAL$  and lasts for 20min, unit stops and error code PA appears. If  $Two - Twi > 1 - TWI_O_ANORMAL$ , error code disappears.

## 3.6 SET DEFROSTING

MENU > Project Menu > SET DEFROSTING

SET DEFROSTING		
T_FROST	◀ 35 ▶ min	
T_DEFROST_IN	◀ 0 ▶ °C	
T_FROST_OUT	◀ 0 ▶ °C	
OK	◀ ▶	◀ ▶

**T\_FROST** sets the time between the end of the last defrost mode and the beginning of the next defrost mode.

**T\_DEFROST\_IN** sets the temperature for T3 of entering defrosting mode. When T3 reaches T\_DEFROST\_IN, unit enters defrosting mode.

**T\_FROST\_OUT** sets the temperature for T3 of exiting defrosting mode. When T3 reaches T\_DEFROST\_OUT, unit exits defrosting mode.

## 3.7 DHW time setting (Customized)

MENU > Project Menu > SET DHW TIME

SET DHW TIME		
SELECT ADDRESS	◀ 07 ▶ #	
COOL MAX TIME	◀ 08 ▶ h	
COOL MIN TIME	◀ 0.5 ▶ h	
HEAT MAX TIME	◀ 08 ▶ h	
HEAT MIN TIME	◀ 0.5 ▶ h	
OK	1/2	◀ ▶

SET DHW TIME		
DHW MIN TIME	◀ 0.5 ▶ h	
DHW MAX TIME	◀ 08 ▶ h	
OK	2/2	◀ ▶

**COOL MAX TIME** sets the maximum operation time for cooling mode when DHW requirement exists.

**COOL MIN TIME** sets the minimum operation time for cooling mode when DHW requirement exists.

**HEAT MAX TIME** sets the maximum operation time for heating mode when DHW requirement exists.

**HEAT MIN TIME** sets the minimum operation time for heating mode when DHW requirement exists.

**DHW MIN TIME** sets the minimum operation time for DHW mode.

**DHW MAX TIME** sets the maximum operation time for DHW mode.

## 3.8 SET E9 TIME

MENU > Project Menu > SET E9 TIME

SET E9 TIME		
E9 PROTECT TIME	◀ 10 ▶ S	
E9 DETECTION METHOD	◀ 1 ▶ #	
OK	◀ ▶	◀ ▶

**E9 PROTECT TIME** sets the delay time of water flow detection. When unit starts, water flow will not be detected until at least (2+  
**E9 PROTECT TIME/60**) minutes have elapsed.

**E9 DETECTION METHOD** sets the method of water flow detection. If “1” is selected, the water flow switch is detected after water pump starts. If “2” is selected, the water flow switch is both detected before and after the water pump starts.

### 3.9 INV PUMP RATIO

MENU > Project Menu > INV PUMP RATIO

INV PUMP RATIO		
MIN RATIO	◀ 70 ▶ %	
MAX RATIO	◀ 100 ▶ %	
OK		

**MIN RATIO** sets the minimum output ratio of inverter pump which is installed in the main water pipe.

**MAX RATIO** sets the maximum output ratio of inverter pump which is installed in the main water pipe.

### 3.10 CHECK PARTS

MENU > Project Menu > CHECK PARTS
